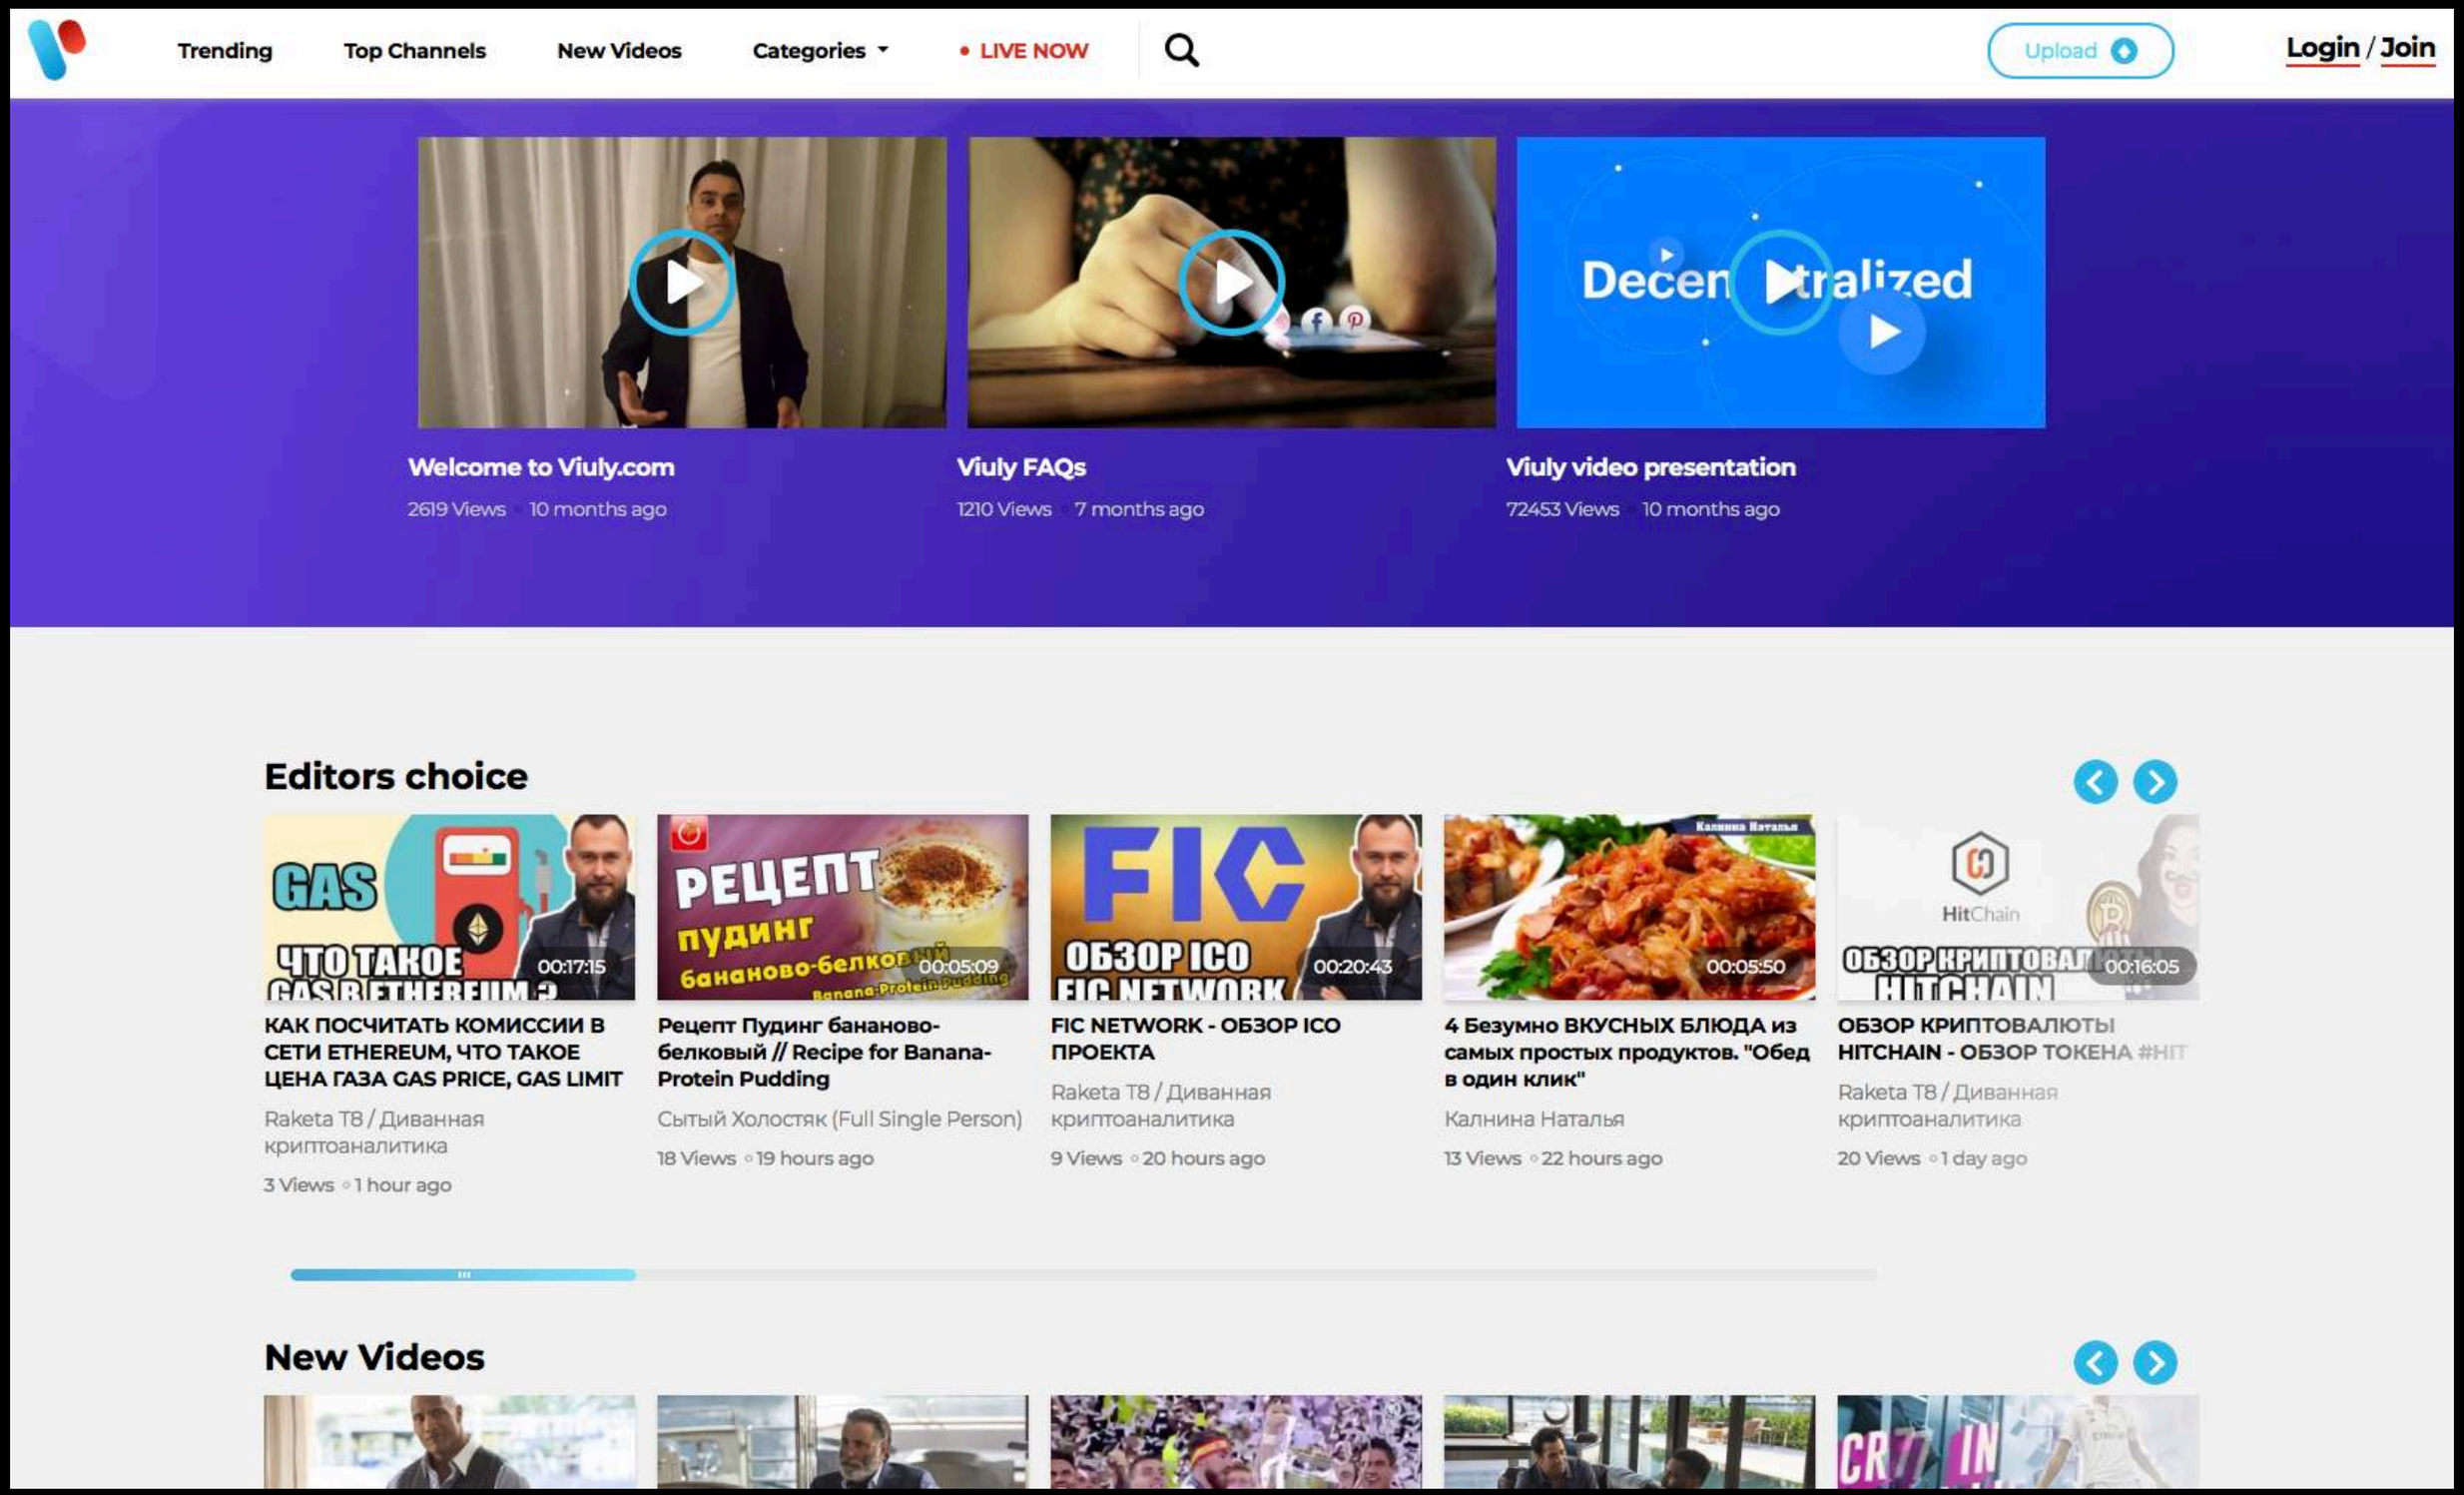
A look at 9 Startups utilising Blockchains for Funding, Publishing & Distribution of Video Content

Presented by Rich Tella

BitJoin - bitjoin.me

Qwids - https://qwids.info



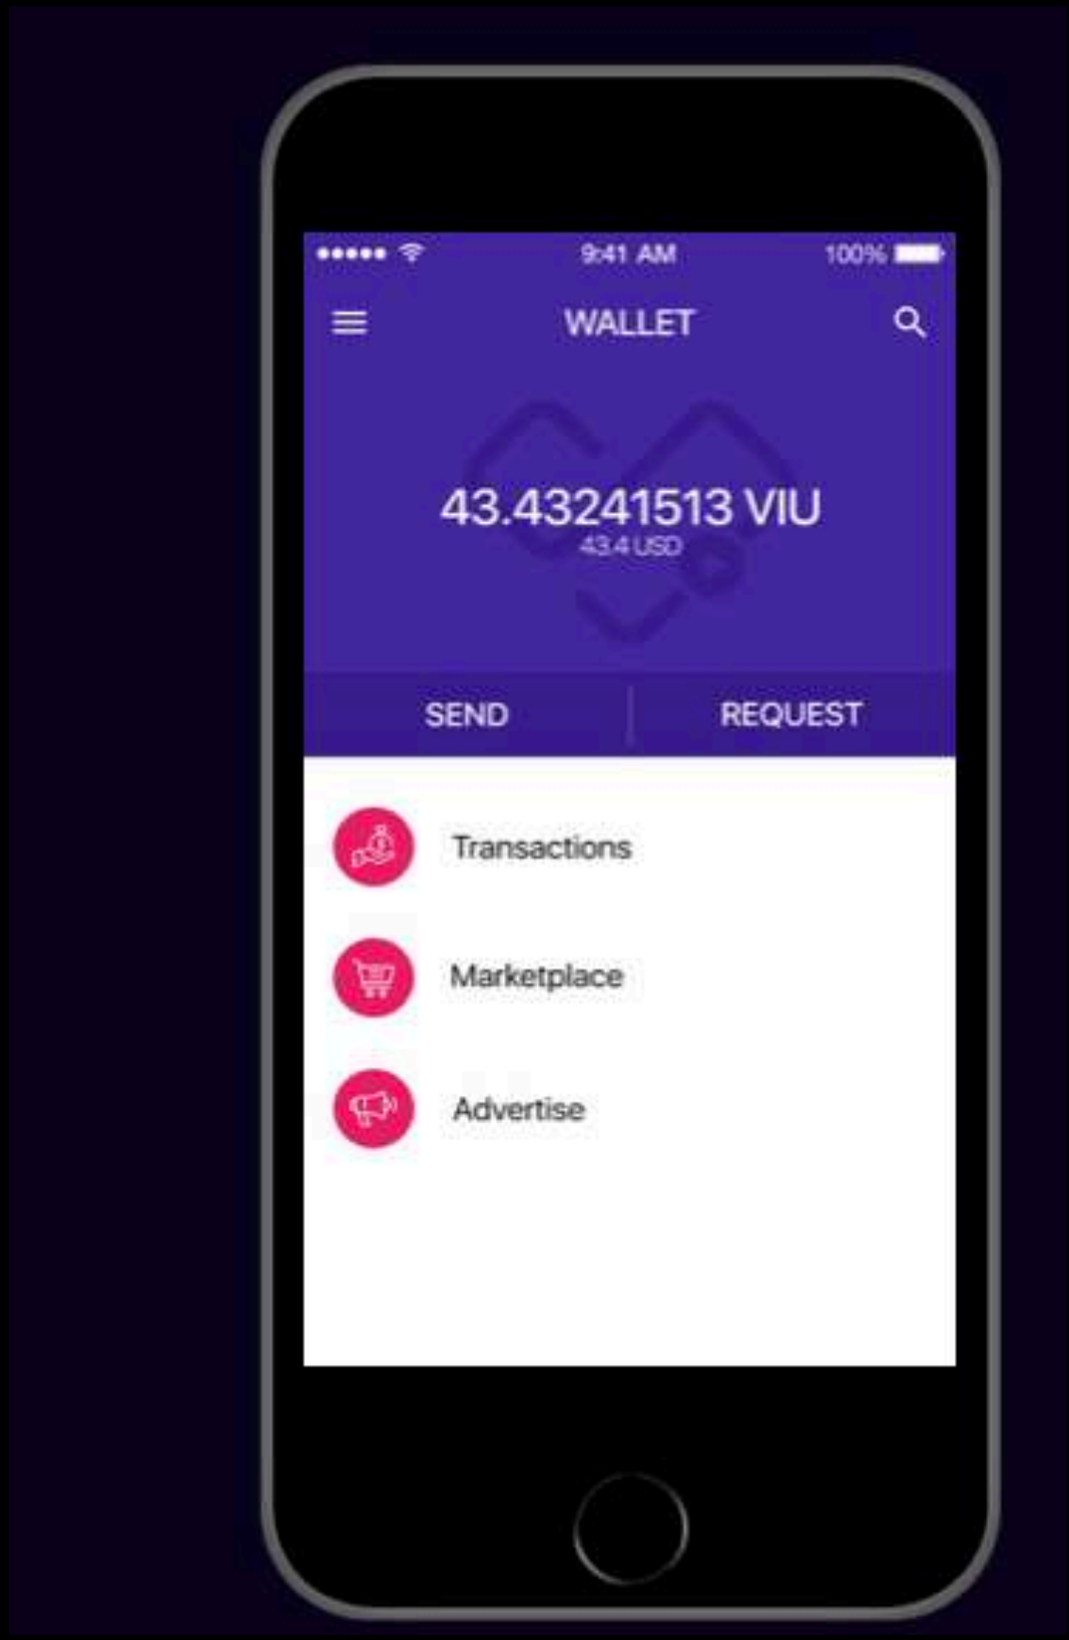
Viuly - https://viuly.io

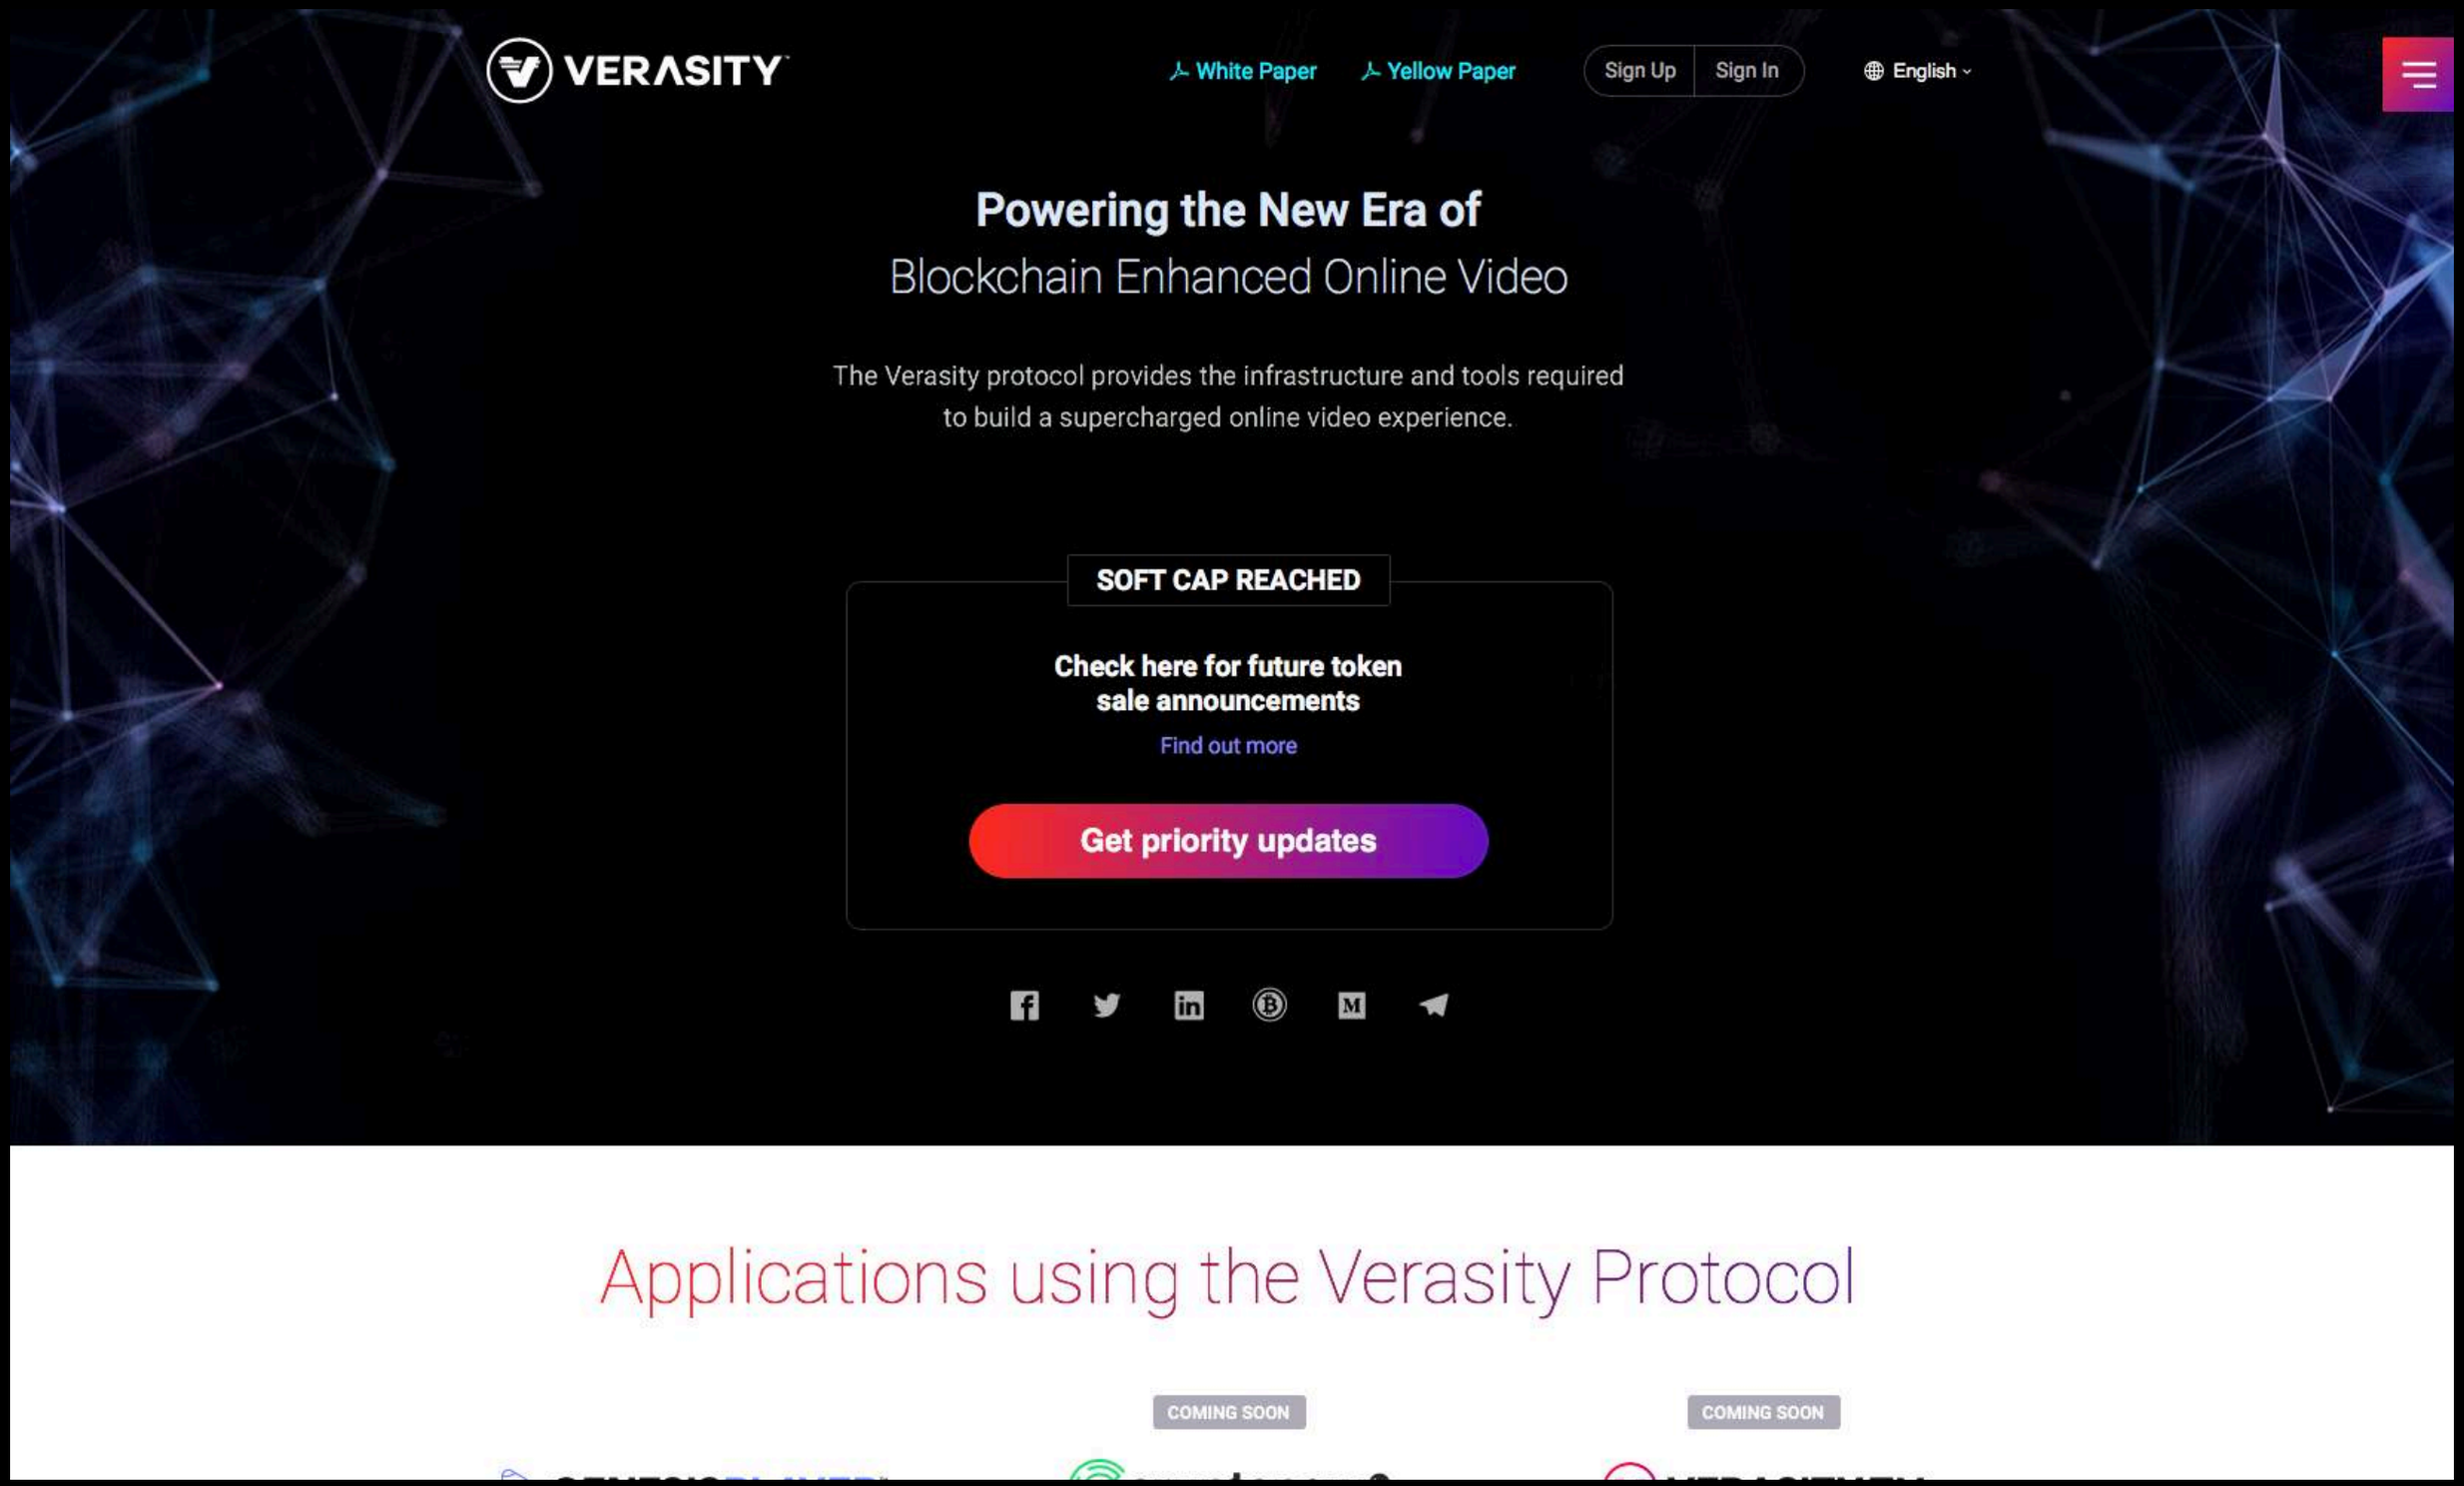
Authors sell access to their premium content, receive donations from users and earn from in video ads. Users watch free videos and get rewards. Advertisers place ads and pay directly to our users.

Advertising budgets are distributed amongst content creators and users. No more middlemen!

All payments on the platform are done automatically in VIU tokens and the transaction history is stored on the blockchain.

VIULY tokens (VIU) are based on the Ethereum blockchain smart-contract and represent the main tool for transferring the value between advertisers, content creators and users.





Verasity - https://verasity.io

The Verasity protocol provides

VeraPay
Decentralised Payment system enabling crypto micro-transactions between video content owners and viewers.

Proof of View (PoV™)
Patent pending blockchain technology that produces accurate, secure and auditable audience verification metrics.

Spark Marketplace
Smart contract based system for Content Creators to fund their channel development and sell digital collectables.

VeraPlayer
HTML5, full HD video player that works across a variety of modern mobile and desktop browsers.

The 21million project - https://www.21million.co.uk

DECENTRALISED FILM & TV PRODUCTION

Decentralised film production is an entirely new concept, and 21 Million will be the first show in the world to be made this way.

For every country Benjamin visits on his quest we'll have a writer, a director, a local cast and crew. Local knowledge from local 'Nodes'.

Emerging talent sourced from each city on Ben's journey will help craft the story of his adventure - from the bars he visits to the streets he walks and the places he hides. And this is where the real crypto community comes in.

Locations, extras and even supporting actors are drawn from among the community that has made the series possible by funding it.
And fans can make direct contributions online.

By listening to the views of creative people wherever we travel and involving local people everywhere we shoot, we can collectively produce a show that is authentic and original, to tell the story of the Bitcoin revolution through the eyes of the world's most hunted CIA operative.

THIS IS DECENTRALISED STORYTELLING

Steemit.com - https://steemit.com

Steemit.com is powered by the Steem blockchain and STEEM cryptocurrency.

The website reads and writes content to the Steem blockchain, which stores the content in an immutable blockchain ledger, and rewards users for their contributions with digital tokens called STEEM.

Every day, the Steem blockchain mints new STEEM tokens and adds them to a community's "rewards pool". These tokens are then awarded to users for their contributions, based on the votes that their content receives.

Users who hold more tokens in their account as "Steem Power" will get to decide where a larger portion of the rewards pool is distributed.

FILMMAKERS

Decentralised storage system provides security from piracy

Enhanced control over distribution including the ability to set prices

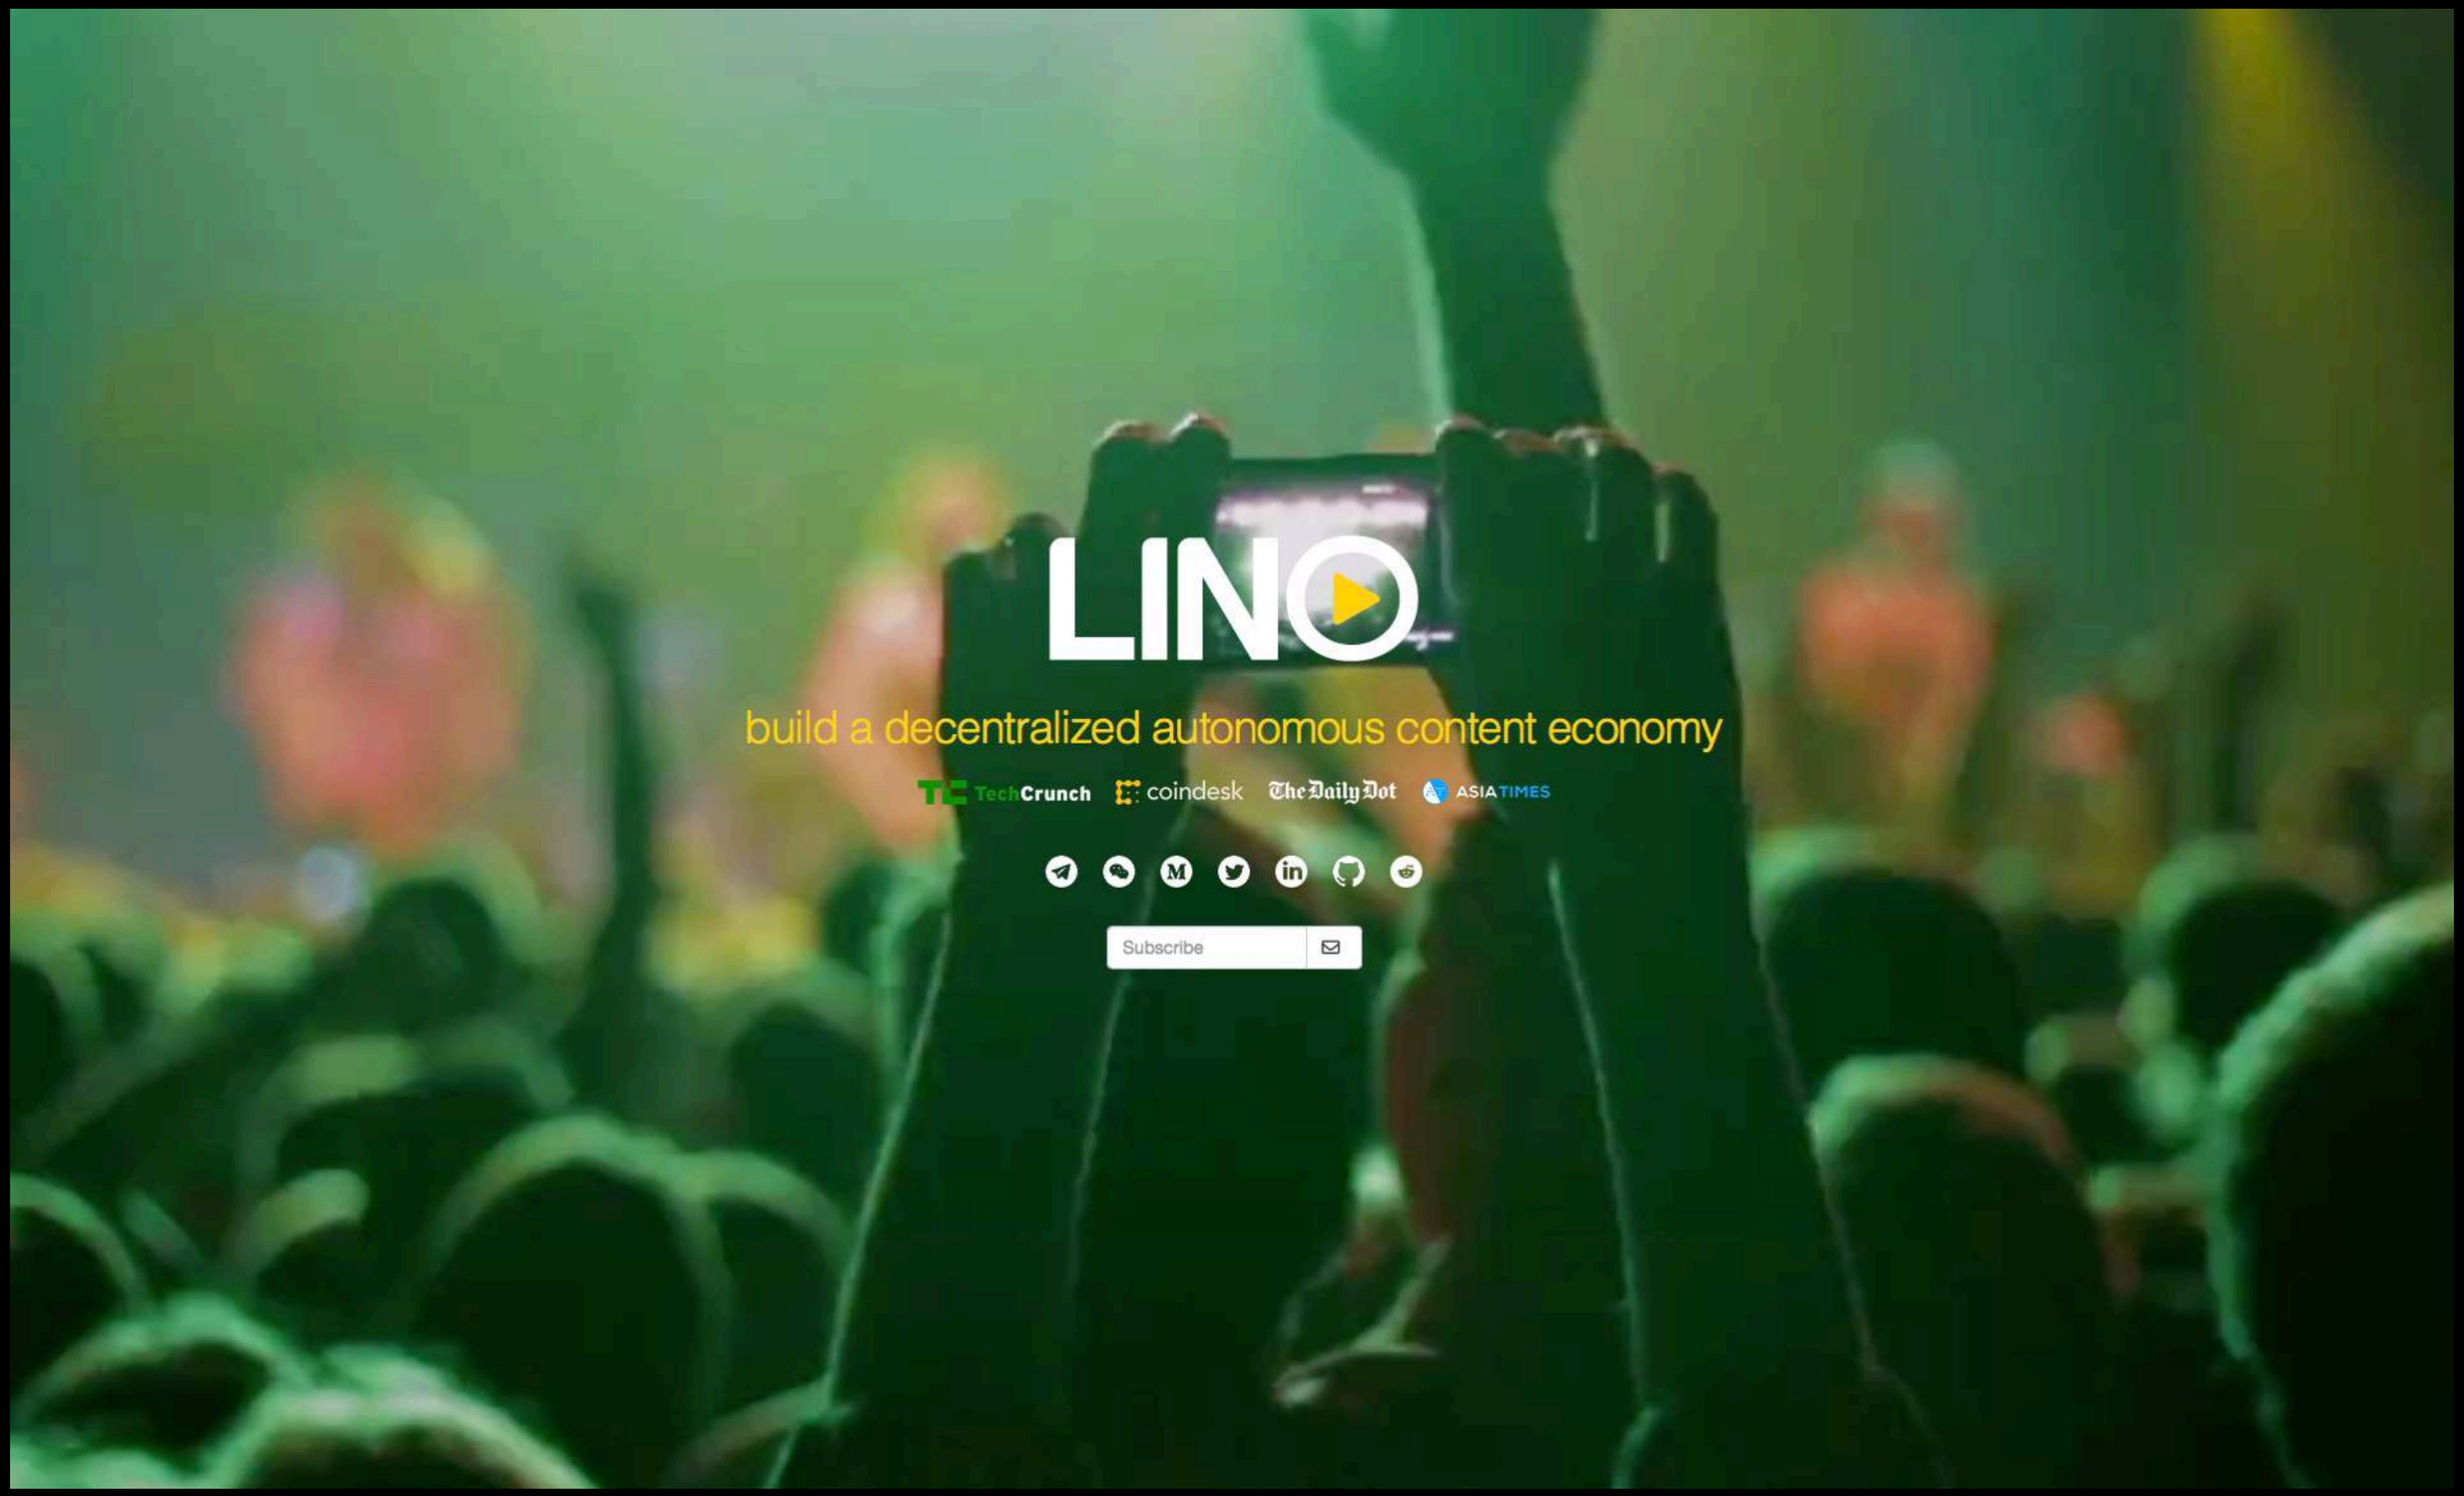
Immutable Blockchain Ledger - instantaneous and transparent payment systems

CONSUMERS

Unique content delivered directly from the filmmaker

Personalised recommendations

Make history by joining the first volume blockchain distributor for streaming film

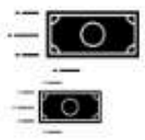


Lino - https://lino.network/

LINO BLOCKCHAIN

FREE TRANSACTIONS

Lino's dynamic bandwidth limit supports free transactions. Users can use LINO to show their appreciation to content creators through micro-tipping, gifting, purchases, and subscriptions. All exchanges of value within the Lino community will occur through LINO.



THOUSANDS OF TPS

Lino uses Practical Byzantine Fault Tolerant (PBFT) based Proof-of-Stake (PoS) consensus algorithm to achieve thousands of transactions per second. Transactions on the Lino network are processed with instant finality. Lino was built to handle a large amount of transactions happening on its network.

PROOF OF CONTENT VALUE

We calculate the market value of content, then pay out content creators. At Lino, we believe paying based on impressions alone would create fraudulent consumption. We employ several measures to prevent the system from being flooded with fraud or spam.

PROOF OF HUMAN ENGAGEMENT

The Lino ecosystem is built upon engagement from real humans, not bots. Proof of Human Engagement is used to prevent bots from manipulating the reward distribution and discourage potential attacks.

INFRASTRUCTURE AUCTION SYSTEM

Good video streaming services rely on the performance of 3 parts: Storage, Transcoding, and CDN. We believe in using a decentralized, peer-to-peer CDN, but current solutions are below par. Lino, at this stage, proposes an auction based method to prioritize performance.

NATIVE CURRENCY SYSTEM

Lino is developing its own currency on the LINO blockchain. The currency system aims to create a sustainable content economy that incentives all community members – including content creators, curators, developers and infrastructure providers.

flixxo

Community based video distribution

Support your favorite video creators by sharing their content with other users and get rewarded with state-of-the-ant flixx tokens.
